## ESPRIT

The Exercise Scenario Planning Real-time Integrated Test (ESPRIT) is a server-based software package that allows range and test facilities to interactively plan and script test events .

This package, which contains the Solipsys Scenario Planning and Rehearsal Tool, is designed to plan an event, monitor changes from the plan as an exercise evolves, and provide real-time, interactive replanning based on event objectives and constraints. User input to ESPRIT is through the Solipsys Tactical Display Framework (TDF) product, and sensor data to monitor events is input through the Solipsys Multi Source Correlator Tracker (MSCT) product.

**ESPRIT Objective: Provide range and test facilities with an integrated capability to :**

- \* Plan exercise scenarios and simulate scenarios, including all participant platforms and sensors.
- \* Stimulate range and participant systems for exercise rehearsals.
- \* Provide real-time display and analysis of planned vs . actual events,
- \* Support real-time contingency replanning.
- \* Provide capability for real-time distribution of event visualization to remote users.
- \* Stimulate range and participant systems for exercise rehearsals.

# ESPRIT

The Exercise Scenario Planning Real-time Integrated Test (ESPRIT) is a server-based software package that allows range and test facilities to interactively plan and script test events

This package, which contains the Solipsys Scenario Planning and Rehearsal Tool, is designed to plan an event, monitor changes from the plan as an exercise evolves, and provide real-time, interactive replanning based on event objectives and constraints. User input to ESPRIT is through the Solipsys Tactical Display Framework (TDF) product, and sensor data to monitor events is input through the Solipsys Multi Source Correlator Tracker (MSCT) product

**ESPRIT Objective: Provide range and test facilities with an integrated capability to :**

- \* Plan exercise scenarios and simulate scenarios, including all participant platforms and sensors.
- \* Stimulate range and participant systems for exercise rehearsals
- \* Provide real-time display and analysis of planned vs actual events,
- \* Support real-time contingency replanning
- \* Provide capability for real-time distribution of event visualization to remote users.
- \* Stimulate range and participant systems for exercise rehearsals
